

Rahul Kumar Sharma

Full Stack Developer

rksharma15700@gmail.com | +91-9110056292 | [Linkedin](#) | [Portfolio](#) | [Github](#)

Profile

Full Stack Developer with 4+ years of experience building and shipping enterprise applications end-to-end. Core stack: Angular (NgRx, RxJS, SSR), React/Next.js (Redux Toolkit, Custom Hooks), and Node.js/Express.js with REST API design, JWT authentication, and performance optimization. Hands-on experience integrating AI/LLM-powered services into enterprise platforms. Deployed production systems on AWS EC2 with GitHub Actions CI/CD pipelines. Experienced in stakeholder collaboration and translating business requirements into scalable technical solutions.

Skills

Frontend: Angular, React.js, Next.js, TypeScript, NgRx, RxJS, SSR, Redux Toolkit, Custom Hooks, Tailwind CSS, SCSS, PrimeNG, Vite

Backend: Node.js, Express.js, REST API Design, JWT Auth, RBAC, Global Error Handling, Third-Party API Integration, Spring Boot

Database: PostgreSQL, MySQL, MongoDB

Cloud/DevOps: AWS (EC2), Docker, GitHub Actions, CI/CD Pipelines

Testing: Jest, Vitest, React Testing Library

Other: Feature Modular Architecture, Agile/Scrum, Stakeholder Communication, Code Reviews, System Design

Professional Experience

Full Stack Developer, *Lavinstar Logistic Pvt Ltd*

Nov 2024 – Present | Bengaluru, India

- Architecting logistics platforms (Angular + React + Node.js) deployed on AWS EC2, serving 10K+ daily workflows across shipment tracking and analytics.
- Building Express.js REST APIs with JWT auth, RBAC middleware, global error handling, and third-party logistics integrations.
- Implementing Angular SSR, NgRx state management, and RxJS reactive data flows for high-performance dashboards.
- Set up GitHub Actions CI/CD pipelines for automated build, test, and deployment — reducing release cycles by 40%.
- Optimized API response times by 30% through query tuning and payload restructuring; improved reporting efficiency by 15% via direct stakeholder collaboration.

Software Engineer, *Floydee Infotech Pvt Ltd*

Feb 2024 – Sep 2024 | Kolkata, India

- Built enterprise React + Node.js applications with feature modular architecture, JWT auth (access/refresh tokens), RBAC, and PostgreSQL workflows.
- Developed Express.js REST APIs with input validation, analytics pipelines, and compliance reporting modules.
- Implemented Redux Toolkit + custom hooks, reducing component boilerplate by 35%.
- Improved performance via lazy loading and code splitting — 25% higher user retention, faster page loads.
- Mentored juniors, led code reviews, and delivered features across 3 concurrent modules in Agile sprints.

Software Engineer, *Biginfolabs Pvt Ltd*

Dec 2021 – Nov 2023 | Bengaluru, India

- Worked on AIRA (React + Node.js), an AI-powered research platform — built UI components for weak-signal dashboards and integrated REST APIs consuming LLM-powered Python intelligence services.
- Developed frontend modules for CURATUS (Angular + Express.js), a collaborative patent analysis and competitor intelligence platform for enterprise teams.
- Built reusable UI components, dynamic forms, and role-based workflows across both platforms for 5+ enterprise clients.
- Contributed to Node.js and Spring Boot backend services for authentication and document processing pipelines.
- Strengthened code quality through unit testing (Jest, Vitest) and structured API error handling practices.

Education

B.Tech in Computer Science, MS Engineering College, Bengaluru

Aug 2017 – Jul 2021 | Bengaluru

Projects

Cargostar (Enterprise Shipment Dashboard),

Nov 2024 – Present

Angular 15+ | NgRx | RxJS | JWT Auth | Node.js/Express.js | AWS EC2

- Real-time logistics dashboard with KPI insights, advanced ETD/ETA filters, and milestone tracking for high-volume shipment operations.
- Shipment drill-down with cargo details, contextual side-panels, and in-app document viewer — reduced external tool dependency by 20%.
- Backend API layer serving shipment data to dashboards with sub-second response times.

AIRA (AI-Powered Research & Innovation Platform),

React.js | Node.js | Express.js | Python | LLM Integration | REST APIs

- Built the frontend for an AI-powered research assistant that detects weak signals and emerging trends in global technology and business landscapes.
- Integrated LLM-powered Python intelligence service via REST APIs for automated trend analysis, competitor monitoring, and innovation risk assessment.
- Developed real-time dashboards for continuous weak signal monitoring, enabling proactive decision-making for enterprise innovation strategy.
